

# AutoFreight

**Do you miss out on fully recovering freight costs?  
Or waste time calculating them?**

Any company with significant outward freight costs will fall in love with **AutoFreight**, an automatic freight calculator for Jiwa Financials. It ensures that you always charge the correct freight cost on invoices and is fully automatic, eliminating labour costs and human mistakes.

A freight maintenance form enables you to enter and maintain freight company charges. This form includes the following options:

- Location. There is no limit to the number of locations supported.
- Type. The application can support multiple types of freight per location. For example both courier and normal road freight.
- The default freight company for each location/type.
- Quantity Breaks. An unlimited number of quantity breaks are supported.
- Full freight cost details including cost/kg, levy %, consignment fee and minimum charge.

| Location              | Type    | Creditor                                     | FromQty | ToQty | Cost/Kg | Levy% | Consign Fee | Min Charge | Last Saved |
|-----------------------|---------|--|---------|-------|---------|-------|-------------|------------|------------|

And a simple freight calculator enables you to quickly check the freight cost for any weight to any location.

|              | Freight  | Courier  |
|--------------|----------|----------|
| Cost - \$    | \$242.00 | \$759.85 |
| Cost - \$/Kg | \$0.24   | \$0.76   |

For each customer, their location is defined as well as the default type of freight to apply. When an invoice is created, these customer settings are read into memory and with every change to the quantity on the sales order, the freight charge is automatically recalculated.

While fully automatic, it still has the flexibility to handle real world exceptions to the rules. This automatic freight calculation can be suppressed for any customers that are not charged freight and the type of freight to use can be manually changed from the default on each sales order.

**AutoFreight** can also be configured to calculate freight charges based on volume rather than weight for clients with bulky items.
